

# Special Features

Microsearch provides a number of special features our clients have asked for over the years. Some of these features are quite unique. Here's a list:

- Image/Text Toggle button for scanned pages
- Sticky Notes
- Saved Searches
- Search Refinement
- User Preferences

In addition to the list of new features, existing features have been improved in the latest releases of Microsearch.

1. **Browser Compatibility** – Microsearch is compatible with all major browsers
2. **Speed** – Microsearch has significant performance improvement in document load times and browse functions in the latest release (April 2014).
3. **Access to PDF versions** – the new product has the PDF version of the document readily available rather than part of the fielded elements
4. **User account modification:** Users have more control over their own account and can change update profile information
5. **Redefine Search** – Users can refine existing searches or clear the search form from the search results page.
6. **Better HTML symbol display** – There is better display of symbols and other non-standard HTML characters.
